

MTP-A4

CHARACTERISTICS

- Functioning by friction; installation by controlled torque
- Use for medium loads.
- Easy installation
- Use in cracked and uncracked concrete
- Use for static or cuasi-static loads
- Approved for fire resistance R30 to R120
- A4 stainless steel version

**4. PRODUCT INSTALLATION**

**1. DRILLING**

Check the concrete base is compact and porosity is insignificant.  
Suitable for wet, dry or flooded drill holes.  
Use drill in hammer mode.  
Drill to the specified diameter and depth values.

**2. BLOW AND CLEAN**

Clear the drill holes completely of dust and fragments.  
Use air pump and brush.

**3. INSTALL**

Insert the anchor in the holes until the red mark is flat with concrete Surface.  
Use hammer in case of need; DOMTA tool could be used alternatively.  
The installation could be done through the fixture baseplate.

**4. APPLY TORQUE**

Apply nominal installation torque using a torque wrench.  
Once installed it can be verified the total length of the anchor through the letter on bolt tip.

**5. RESISTANCES**

Characteristic resistance in C20725 concrete for an isolated anchor, without spacing and edge distance effects.
